This checklist represents 225 species of birds sighted in and around the Quimper Peninsula. Located on the Pacific Flyway at the convergence of the Strait of Juan De Fuca and Puget Sound, it includes both open and sheltered ocean areas, freshwater lakes and streams, riparian and young upland forests. It also is within sight of two important wildlife habitats, Olympic National Park with almost a million acres of primeval landscape, and Protection Island, one of the largest wildlife breeding grounds in the Pacific Northwest. These factors create excellent birding year-round.

Sp = Spring Migration: March, April, May
S = Summer: June, July, August
F = Fall Migration: Sept, Oct
W = Winter: Nov, Dec, Jan, Feb

C = Common (seen every year)
U = Uncommon (usually present but not easily seen)
O = Occasional (birds not present every year)
R = Rare (birds present but Quimper Peninsula totals are in single digits)
Note: Other species have been seen here but with single records or a few totally. Contact Admiralty Audubon for more details.
